

## A bold and bright Front-end Developer

### This is what we care about:

- You approach interface problems systematically from multiple angles, understanding there are pros and cons to all solutions.
- Maintain organization and documenting progress is key in order to explain your thinking and gain consensus from your team.
- Craft. Bringing products to life that are functionally intuitive and beautifully designed. You have a strong eye for aesthetics and a great understanding of typography, layout, and color. You incorporate interactions, icons and animations when appropriate.
- Understanding the target audience. You create products with the user in mind
- Collaboration and iteration. You work with design, back-end development, and business units and believe that creating fantastic user experiences involves everyone and is the result of rigorous critique and an open mind.
- Passion about what you do. You care about the big picture of how technology can bring positive change, as well as every last detail of how people interact with our product.
- Working fast and efficiently is second nature.

### At Inspirething you will:

- Develop high-quality consumer and merchant facing products.
- Bring to market a best-in-class user-facing experiences on the web, tablet, and mobile.
- Work with designers, back-end developers, marketing, and business teams.
- Developing in hours and days, not weeks and months.

### Who you are:

- You're smart, articulate, and business minded. You think critically before you start to code. You make cool things and can explain to others why they're cool. You can work with a team. Because we're a small multi disciplinary team strong communications is of vital importance. You are nice and grounded, and people love working with you.
- You love working in a team of accomplished designers and creative developers who like exchanging ideas while constantly trying to take things a step further.
- Excellent communication and diplomacy skills: the ability to listen, convince and collaborate in a cross-functional environment.
- Practical, hands-on attitude combined with a good sense of humor.

### You have:

- A portfolio demonstrating a range of capabilities and understanding across various formats and methodologies, e.g. websites, software applications, mobile/tablet UI and apps.
- College / Academic level thinking.
- Solid understanding of web and mobile technologies. Experience in rapid prototyping and UI frameworks a strong plus.
- You know HTML, CSS and JavaScript deeply and a firm grasp of the ecosystem around it.
- Ability to create simple and intuitive solutions to complex problems.

### In the past, you:

- Worked on a variety of digital projects.
- Translated wireframes.
- Collaborated with designers and other developers
- Worked under quick deadlines. Efficiency is second nature.
